It is important to note that Wi-Fi media devices will be unable to use Southeast Secure/Southeast ResNet wireless services, as most do not come preloaded with the necessary software to be compatible with SEMO’s wireless encryption – therefore a wired Ethernet connection must be used. Note - Some screenshots may not be the same software versions

Finding the MAC Address

1. Plug the Roku device into the LAN port using a Category 5/6 ethernet cable.

2. From the device’s home screen, select “Settings”.

3. From the device’s settings page, select “About”/“Player Info”.
4. The Ethernet **MAC address** will be near the bottom of the page, and will be presented in the following format: `a1:b2:c3:4d:5e:6f` (Six groups of two alphanumeric characters (letters or digits), separated by a colon)

Make note of the “Wired MAC address”.

**Registering the Device**

7. Enter your Southeast Key and Password for the Username and Password, and type the aforementioned MAC address into the MAC address field, ensuring to keep the colons in the address.

8. If you agree to the User Policies, select “Accept.”

9. Restart the Roku, and check to ensure that it is connected.
